SUMMARY

Software Development Engineer with 3+ years of experience building scalable web applications, microservices, and data-driven systems. Specialises in TypeScript, Go (concurrency patterns), and React, with a strong focus on open-source component library development, real-time analytics platforms, and system design. Passionate about clean, maintainable code and delivering end-to-end engineering solutions from whiteboard to production.

WORK EXPERIENCE

Senior Software Engineer | Deepta AI Private Limited, Hyderabad, India

08/2025 – Present

- Engineered a full-stack Data Analytics platform with real-time event ingestion pipelines using Kafka, and ClickHouse-backed analytics covering funnels, retention curves, and user flow visualisations serving live production traffic.
- Built the analytics frontend with React, TypeScript, Vite, TanStack libraries, Tailwind CSS, and Zustand; architected the backend on Go microservices with MongoDB, Redis, Docker, and Kubernetes (GKE) for horizontal scalability.
- Architected a high-scale student application onboarding platform for universities using Golang microservices, leveraging goroutines and channels for concurrent request processing across multiple institutions simultaneously.
- Designed pub/sub event pipelines using Kafka for async inter-service communication; implemented Redis for distributed caching and session management, reducing database load significantly.
- Built JSON Web Token (JWT)-based authentication with refresh/access token rotation; deployed all services on Google Cloud Platform (GCP) GKE via Docker and Kubernetes within a CI/CD pipeline using GitHub Actions.
- Developed embeddable JavaScript packages to render dynamic application forms on third-party university websites; built Backend for Frontend (BFF) reverse proxy converting third-party cookies into first-party cookies, resolving cross-origin tracking restrictions in modern browsers.

Software Engineer | Apxor Technology Solutions Pvt Ltd, Hyderabad, India

09/2024 – 07/2025

- Developed a comprehensive web application for a hearing aid solution in an Agile team, streamlining management of appointments, test modules, product sales, warehouse operations, and CRM functionalities.
- Implemented the frontend with ReactJS and TypeScript, leveraging TanStack libraries for routing, data fetching, and form handling; Zustand and Immer for efficient state management; achieved ~90% unit test coverage using Vitest with end-to-end tests via Playwright.
- Developed and maintained scalable CRUD APIs in Go within a microservices architecture, applying code review practices to ensure high performance and maintainability.

Associate Web Developer | Apxor Technology Solutions Pvt Ltd, Hyderabad, India

07/2023 – 08/2024

- Migrated legacy Create React App (CRA) project to Vite.js — Lighthouse score 54 → 97 (80% improvement), INP and blocking time reduced from ~500ms to negligible via lazy loading, caching, and image optimisation.
- Designed and delivered the Stories feature resembling social media stories, and the Floating Action Button (FAB) feature — both shipped to production with measurably improved user engagement metrics.
- Maintained and enhanced the company website using Webflow, ensuring cross-device compatibility, responsive design, and professional standards across all breakpoints.
- Monitored website analytics including traffic and performance metrics; performed in-depth analysis to identify trends and generated actionable insight reports that directly informed product and design decisions.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Go, HTML, CSS

Go: Goroutines, Channels, WaitGroup, Mutex, worker pools, context cancellation, gRPC

Frontend: React.js, Next.js, TanStack libraries, Zustand, Tailwind CSS, Vitest, Playwright, Webflow

Backend: Microservices, RESTful APIs, Node.js, Express.js, WebSockets, Server-Sent Events (SSE), BFF pattern

Databases & Messaging: PostgreSQL, MongoDB, ClickHouse, Redis, Kafka, SQL

DevOps & Cloud: Docker, Kubernetes (GKE), GCP, CI/CD (GitHub Actions, GitLab CI/CD), Git

Other: Figma, Web APIs, JSON Web Token (JWT), OAuth, System Design, Data Structures & Algorithms

EDUCATION

Bachelor of Technology – Computer Science and Engineering

08/2019 – 04/2023

JNTUGV University College of Engineering | Vizianagaram, India

PROJECTS

ZenithUI — Open-Source React Component Library | zenithui-docs.vercel.app • github.com/ChanduDobbili/ZenithUi

- Published an open-source React component library with TypeScript-first architecture, tree-shaking support, CSS variable theming with Tailwind-ready customisation, and full WAI-ARIA accessibility compliance.
- Ships 13+ components including Day Picker, Time Picker, Toast Notifications, Light Box, and Video/Audio Players as tree-shakeable scoped packages (@zenithui/day-picker, @zenithui/toast, etc.) with zero-bloat selective imports.

TECHNICAL WRITING

Published 3 technical articles on DEV Community covering frontend tooling, SEO, and open-source development:

- Mastering SEO for Next.js: A Practical Optimisation Checklist
- Biome Has Entered the Chat: A New Tool to Replace ESLint and Prettier
- Say Goodbye to Changelog Chaos: Introducing changesetgoo
